## Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

## Listing of Claims:

## 1-49. (Canceled)

50. (Currently amended) A shaft for use with a clamp device, comprising:

a plurality of alternating first beads and second beads, each of the first and second beads having a surface;

wherein each of the second beads has a larger inner diameter than each of the first beads, each of the second beads is supported on the surface of two adjacent first beads at a line of contact locations, and the surface of each of the second beads has a convex configuration in each of the three dimensions at each shape at the line of contact location.

- 51. (Currently amended) The shaft of claim 50, wherein the surface of each of the first beads has a convex shape at the line of configuration in each of the three dimensions at each contact location.
- 52. (Previously presented) The shaft of claim 50, wherein each of the second beads has a larger outer diameter than each of the first beads.

- 53. (Previously presented) The shaft of claim 50, wherein each of the second beads has a smaller outer diameter than each of the first beads.
- 54. (Previously presented) The shaft of claim 50, wherein each of the second beads has the same outer diameter as each of the first beads.
- 55. (Previously presented) The shaft of claim 50, wherein each of the second beads contacts the surface of two adjacent first beads along a the line of contact line is a circular line of contact.
- 56. (Currently amended) A shaft for use with a clamp device, comprising:

a plurality of alternating first beads and second beads, each of the first and second beads having a surface;

wherein each of the second beads is supported on the surface of two adjacent first beads at <u>a line of</u> contact <del>locations</del>, and the surface of each of the first and second beads has a convex <del>configuration in each of the three</del> <del>dimensions at each</del> shape at the line of contact <del>location</del>.

- 57. (Previously presented) The shaft of claim 56, wherein each of the second beads has a larger outer diameter than each of the first beads.
- 58. (Previously presented) The shaft of claim 56, wherein each of the second beads has a smaller outer diameter than each of the first beads.

- 59. (Previously presented) The shaft of claim 56, wherein each of the second beads has the same outer diameter as each of the first beads.
- 60. (Previously presented) The shaft of claim 56, wherein each of the second beads contacts the surface of two adjacent first beads along a the line of contact is a circular line of contact.
- 61. (Currently amended) A clamp, comprising:
  - a handle assembly;
- a gripping assembly having a pair of jaws that can be opened and closed to grip an element; and
  - a shaft assembly having:

a flexible shaft having a proximal end that is coupled to the handle assembly and a distal end that is coupled to the gripping assembly, the flexible shaft defining a bore and comprising a plurality of alternating first beads and second beads, each of the first and second beads having a surface;

wherein each of the second beads has a larger inner diameter than each of the first beads, each of the second beads is supported on the surface of the two adjacent beads at a line of contact locations, and each of the second beads has a convex configuration in each of the three dimensions at each shape at the line of contact location; and

a cable which extends through the bore of the flexible shaft, the cable having a proximal end that is operatively coupled to the handle assembly and a distal end that is operatively coupled to the gripping assembly.

- 62. (Previously presented) The clamp of claim 61, wherein the surface of each of the first beads has a convex configuration in each of the three dimensions at each shape at the line of contact location.
- 63. (Previously presented) The clamp of claim 61, further including a rigid element that can be placed at a first position where the rigid element supports the shaft in a manner where the shaft cannot be bent, and in a second position where the shaft can be bent.
- 64. (Previously presented) The clamp of claim 61, wherein each of the second beads has a larger outer diameter than each of the first beads.
- 65. (Previously presented) The clamp of claim 61, wherein each of the second beads has a smaller outer diameter than each of the first beads.
- 66. (Previously presented) The clamp of claim 61, wherein each of the second beads has the same outer diameter as each of the first beads.
- 67. (Previously presented) The clamp of claim 61, wherein each of the second beads contacts the surface of two adjacent first beads along a the line of contact is a circular line of contact.
- 68. (New) A shaft for use with a clamp device, comprising: a central member; and

10/679,103 Response dated Nov. 13, 2006

a plurality of alternating first beads and second beads alternatingly positioned along the central member, wherein the second beads contact adjacent first beads along a line of contact.
